

Quinte Pediatrics
AND ADOLESCENT MEDICINE

Ouch! Clinic Consent and Agreement

May 2005

Re:

DOB:

The Ouch! Clinic provides assessment of acutely sick teens, children and infants who do not have a family physician and have not been seen by a physician for this acute illness.

We are doing this to ensure that sick youth and children have the opportunity to be assessed while they are sick, during a period when the Health Care system has a shortage of family physicians.

We do not provide primary care, and we are not able to become your child's primary care doctor or pediatrician. Today's assessment is for today's illness only, and we will not be able to help you with other problems or concerns you may have today.

I acknowledge and confirm the following:

1. I/my child does not have a family physician
2. This illness has only started within the past 48 hours.
3. I/my child has not been seen by a physician regarding this illness.
4. Today's assessment will focus only on today's illness, and will be conducted by qualified members of the Quinte Pediatric and Adolescent health team.
